ISABEL CAMPOS

CSIC

CONSEJO SUPERIOR DE INVESTIGACIONES CIENTÍFICAS

CO-CHAIR OF THE TASK FORCE ON :

**“RESEARCH INFRASTRUCTURES FOR
QUALITY SOFTWARE”**

Task force

Authentication and Authorization Infrastructure Architecture (AAI)

Co-Chaired by: Christos Kanellopoulos (GEANT) and Jana Broncova (Masaryk U.)

Web page:

<https://www.eosc.eu/advisory-groups/aai-architecture>

Short url : <https://bit.ly/3sNdBif>

Background and Objectives (see [the charter online](#))

Develop the next version of the EOSC-AAI
Architecture

****Evolution of the AARC architecture**

Co-
chairs

New version of the
EOSC AAI
Architecture

New Use cases and
Requirements

Governance models
for the EOSC AAI

What is the EOSC-AAI work ultimate goal ?

- The core of Scientific work are Research Infrastructures (RIs)
- They can be Laboratories, Universities, Facilities (with some big experiment perhaps)
- There are tens to hundreds of different services provided by an RI
 - Storage, Compute, Group Ware,...
- Sometimes there are a couple of different sciences supported per RI
 - Like DESY : HEP , Photon, Biology
 - Or national institutions like CSIC: HEP, Biology, Material Science, etc etc...

They are called Science Communities

- If those sciences extend the RI, they are called e-infrastructures
 - Like the World-wide (Large Hadron Collider) Computing Grid, WLCG
 - > Laboratories Sites around the world
 - The European Southern Observatory, ESO: 16 Member States
- And many scientists are member of different e-Infrastructures.

The goal is that all Scientist can use their home identity to authenticate to get access to all the European resources

A daily life example

Researcher from institution A
wants to share data with
researcher from Institution B

For that both need to access
the same storage facility
operated by eg. Institution B

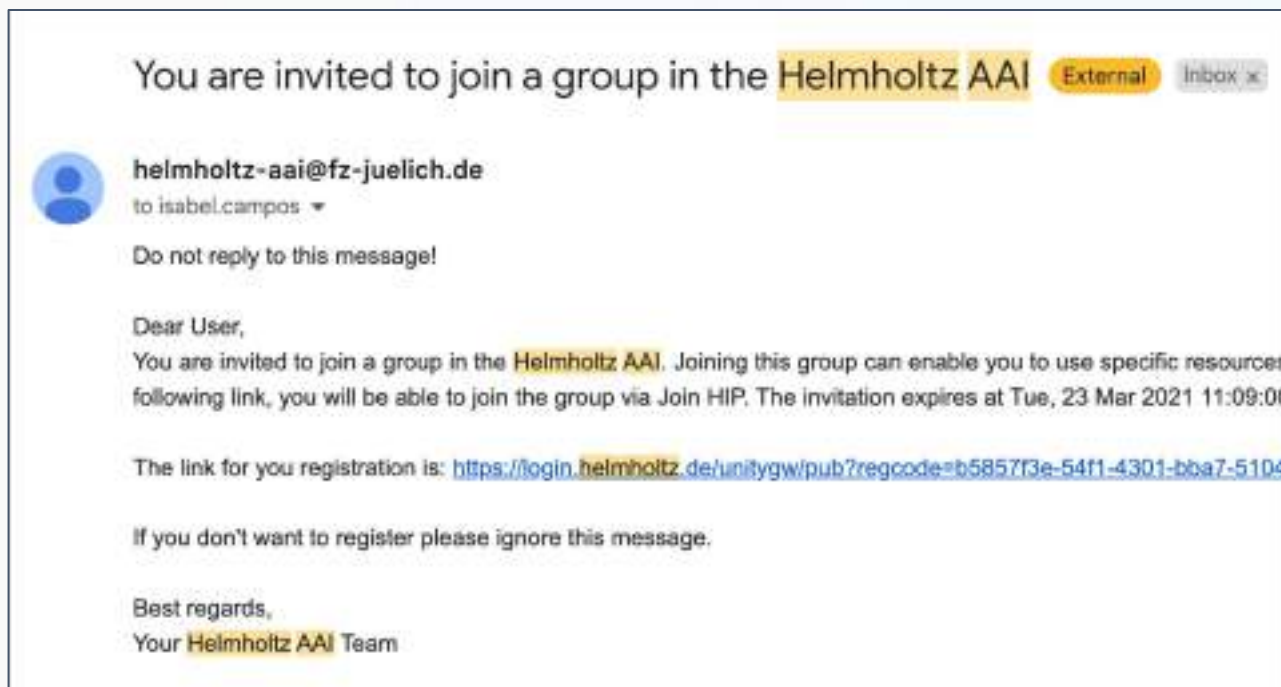

Let me in

How does this work in practice ?

(1) Patrick sends e-mail to Isabel CSIC official account

(2) After checking that this was really Patrick (and not any spamer), Isabel clicks on the invitation link

How does this work in practice ?

(3) ... searches for CSIC in the list of authorized institutions to login, and clicks there:

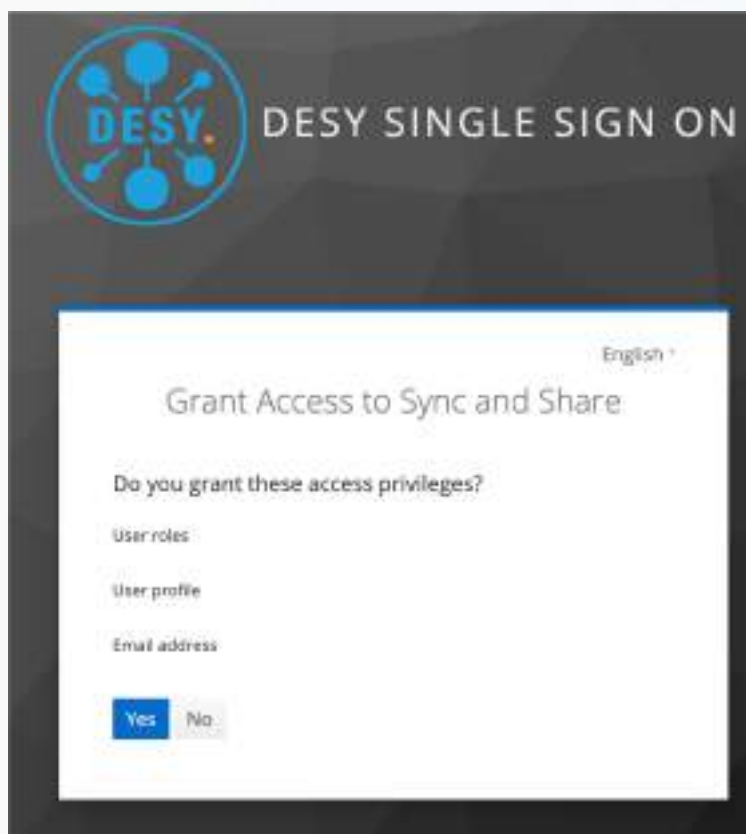

(4) a familiar interface pops-up... and logs in with her institutional credentials

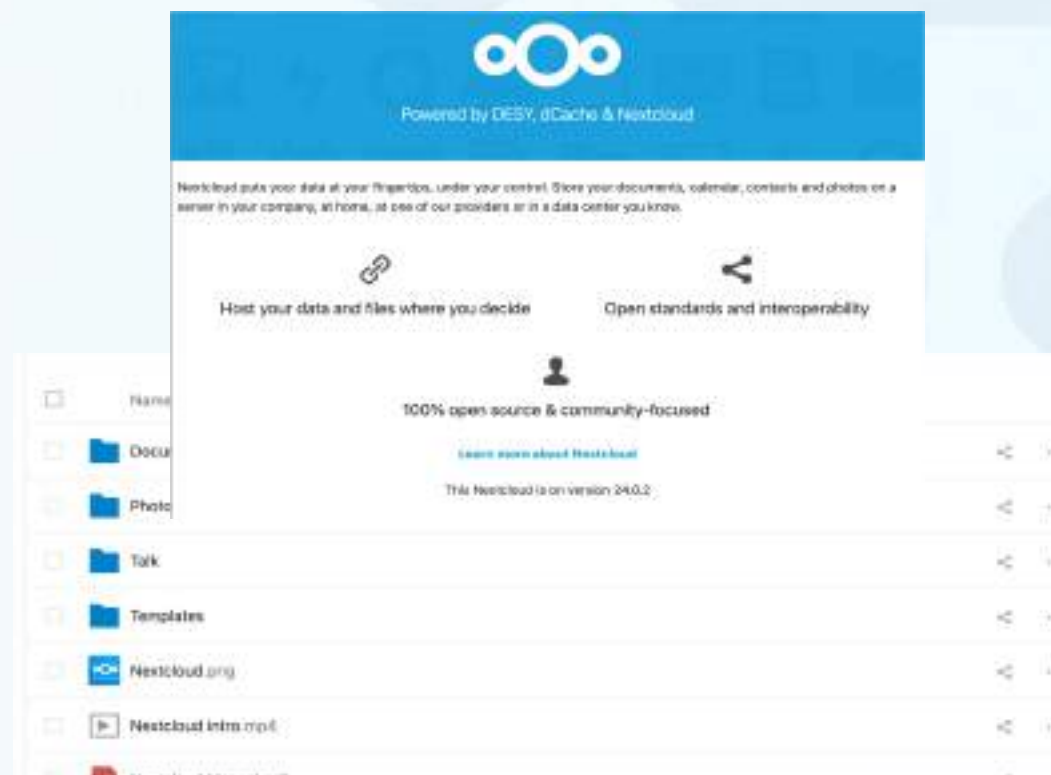

How does this work in practice ?

(5) ... ends up here and clicks on "Yes"
(on the suspicion that clicking "No" will led her nowhere)

(6) ... transfers Terabytes data (all FAIR of course) in the cloud storage resources of DESY

What is the AAI Task Force up to?

Enhance the AARC architecture to provide a truly large scale and international collaborative experience

- Enable the harmonisation of national AAs so that they can seamlessly work together. EOSC TF AAI drives this to the next level, allowing this across different initiatives in Europe
 - New development: these are not only European initiatives, but include National ones
- Current example in Germany: **HIFIS (Helmholtz Cloud Infrastructure)** implements the AARC architecture. **NFDI**, in which HIFIS is one of four players, will be able to have an integrated AAI following the guiding principles (and the details) of **EOSC-AAI**

"AARC Entity Category"

Enable the distribution of Attributes of Researchers at large scale

=> Up to now this was possible only within well defined infrastructures (EGI, WLCG, ...).

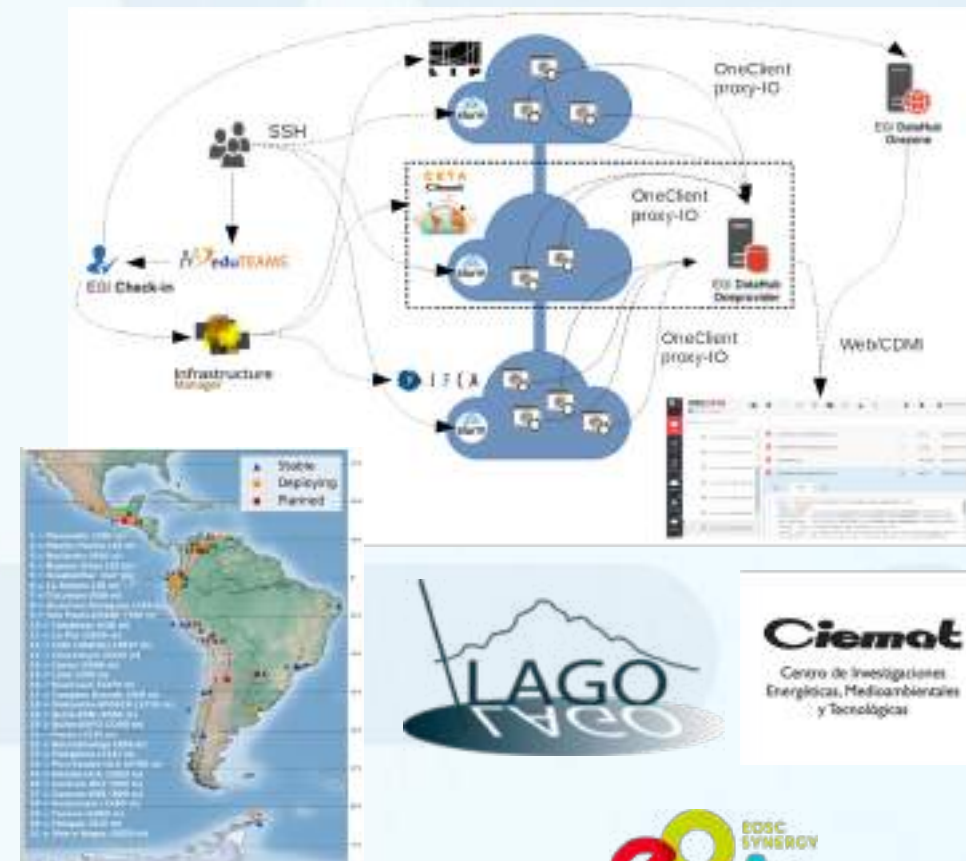

"Remote Token Introspection"

Enable different infrastructures (think EGI + EUDAT) to use tokens crosswise.

=> Allowing EUDAT users to read data from EGI

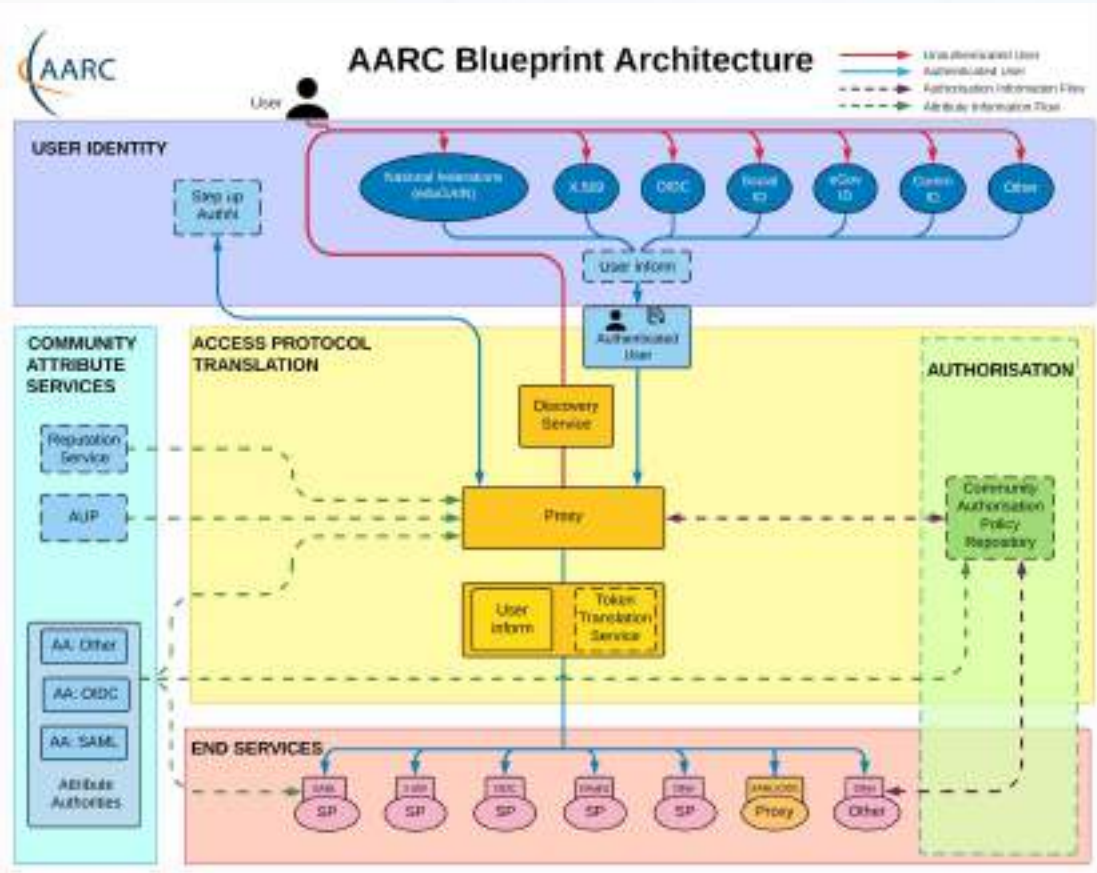

In EOSC-Synergy already, we were able to have users from multiple "providers" (proxies)

LAGO is not managed at EGI, but at eduTEAMS: works because of the compatibility

I will not utter here an explanation of the AARC Architecture

<https://aarc-project.eu/architecture>

Questions on the details of the architecture? profit from the physical presence here of true experts on AAI:

Marcus Hardt (KIT) is around: he will tell you everything you need to know on AAI (and more!)

Task force

Infrastructures for quality research software

Co-Chaired by: Isabel Campos (CSIC) and Roberto di Cosmo (INRIA)

Web page:

<https://www.eosc.eu/advisory-groups/infrastructures-quality-research-software>

Short url : <https://bit.ly/3y9RtIE>

Background and Objectives (see [the charter online](#))

Background:

- **Research software:** Software produced by researchers and used as an enabler for scientific activities
- **Quality:** Criteria to be defined in this TF

Objectives:

- **Foster** the development and deployment of **tools and services** that allow researchers to properly **archive, reference, describe** with proper metadata, **share and reuse research software**.
- Improve the **quality of research software**, both from the **technical** and **organizational** point of view for research software **in general and** in particular the software used **in the services offered through EOSC**.
- **Increase recognition** to software developers and maintainers of research software as a valuable research result, **on a par with publications and data**, in the Open Science landscape.

Software Lifecycle

Kay Graf (FAU/ECAP)
Raphael Ritz (MCPDF)

D1 - Software Research Lifecycle (to be completed soon)

Deliverable 1 of the SG1 - “On the Software Lifecycle” - Task Force on Infrastructure for quality research software

Contributors: Raphael Ritz, Jason Massari, Bernd Flemisch, Kay Graf, Uwe Konrad, Guy Courtbaise (please add)

Task Force Sub-group on “Information Science”

Information Science

José B. Gonzalez Lopez (CERN)
Moritz Schubotz (FIZ Karlsruhe)

Raise awareness of the **EOSC SIRS** report on Scholarly Infrastructures for Research Software and **foster adoption** of its recommendations in existing and future infrastructures.

A GAP analysis on the existing popular repositories is being made

A document compiling the current status versus the SIRS report is being compiled and will be made public (Q4 2022)

Chapter	Requirements/Infrastructure	Repositories						
		Zenodo	HAL	eCheckisData	ISIS	ArXiv	Figshare	ReaDD
Contributors to the gap analysis		José B. González Lopez	Roberto Di Cosimo	Daniel Garje		Conrad Garje (first pass)	Daniel Garje (final pass)	Lukasz Durski
General Requirements								
General Requirements for: Reproducible	English stored by identified individuals of one or more of the following software families, with associated machine-readable metadata associated with it or already existing in the universal archive			There is no specific metadata for software, but scripts are accepted as deposits		There is no specific metadata for software, other than existing papers in software journals or preprint servers		no specific metadata for software
	Support non-public datasets and/or embargo periods				Yes			
	Listing of existing metadata (national) identifier of existing metadata			The process is done through Europe-RI				
General Requirements for: Interoperability	Download of the deposited bundle (data) and the associated metadata				Can't download metadata fully through API	Can't download metadata fully through API		
	Repositories MUST feed the universal archive			current provider of (open) data				interconnected archive
	Repositories SHOULD keep a local copy			The repository is based on a database	Yes	Yes

Technical Interoperability of Data and Services

Co-Chaired by: Eva Sciacca (INAF) and Alvaro López (CSIC)

Web page:

<https://www.eosc.eu/advisory-groups/technical-interoperability-data-and-services>

Short url : <https://bit.ly/3a7vPEW>

Background and Objectives (see [the charter online](#))

Background:

- Starting from the **EOSC Interoperability Framework (EIF)** recommendations the TF aims at supporting the development of the **EOSC Core** and **Exchange**.
- Activities include engaging with the community to coordinate the federation of thematic services, infrastructure services, generic services and datasets and activities to advance the composability of resources.

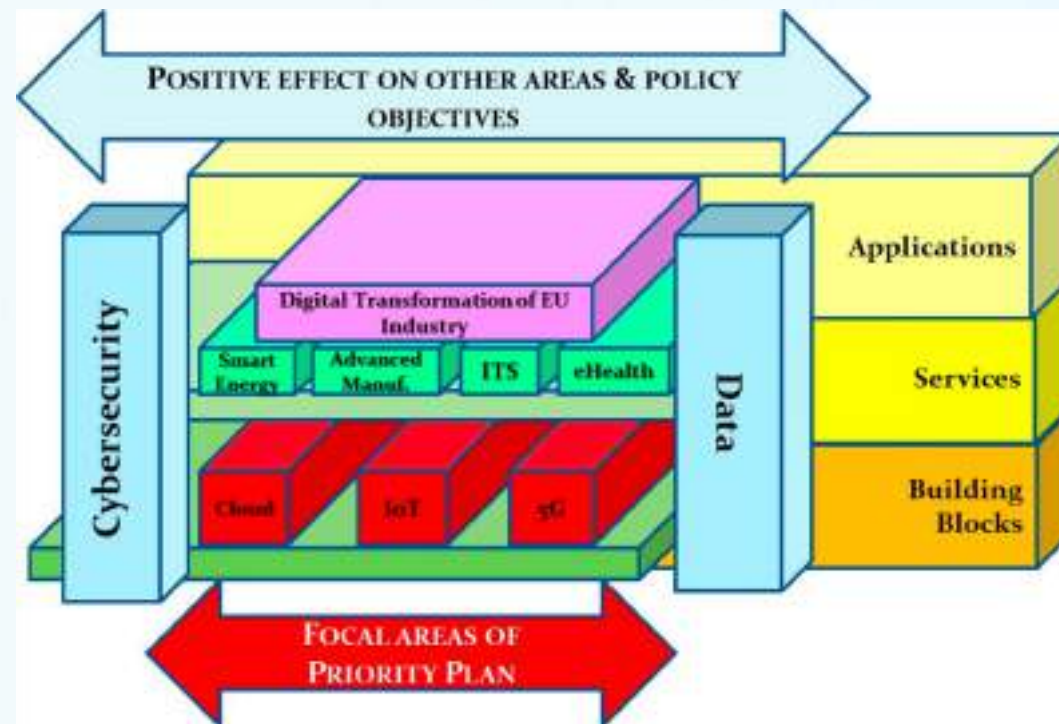

Objectives:

- A first principles discussion on the **guiding principles for interoperability**.
- A **landscape overview and analysis** of the existing systems and interoperability standards for data and services.
- Promote **alignment** between EOSC standards and other major activities (such as RDA, EuroHPC and GAIA-X).
- A **technical architecture** discussion for the EIF.

Challenge of creating an interoperable EOSC

- Interoperability: “The ability of computer systems or software to exchange and make use of information”
- The keyword here is: Standards :
 - Standards to exchange information between IT systems.

Example: W3C is an organization to promote open standards on the Web: HTML , CSS , etc...

The EC proposes to focus standard-setting resources and communities on 5 priority areas: **5G, Internet of Things, Cloud Computing, Cybersecurity and Data Technologies**

Ongoing work

Landscape, Overview
and Scouting

Landscaping phase started

Planned 2022 Q2 : Deliverable “A landscape overview (capabilities and gaps) of the EOSC IF”

Data technical
interoperability

Landscaping phase started

- Data formats study
- Gap Analysis

Services technical
interoperability

Landscaping phase started

- Requirements and Use-Cases Identification
- Gap Analysis

Working groups objectives

Landscape, Overview and Scouting
Chair :
Eva Sciacca INAF

Landscape overview and analysis of the existing systems and interoperability standards that are in place or being developed as part of EOSC Projects, national activities and computing / data centres related to the community and other initiatives including industry.

Data technical interoperability
Chairs:
Philip Wieder GWDG
Joan Maso CREAM

Inventory of data and metadata formats, interfaces and access protocols, to identify and specify a minimal set of functionalities.

Services technical interoperability
Chair:
Damian A. Tamburri TU/e

Inventory of application programming interfaces, access protocols, best practices and standards, to identify and specify a minimal set of functionalities.

Technical Architecture
recommendations
(Not yet started)

Guiding principles for interoperability.
Identify the main technical areas and gaps that require a further development of interoperability guidelines.

Landscaping should be done before all the paths are built and the flowers planted

2017- 2019

2019- 2021

2021- 2023

Task Force on “EOSC Interoperability” to collect feedback

How many flowers will survive the EOSC landscaping?
