EOSC FESTIVAL 2023
National Tripartite Event
Poland
Research Data Management at the National Science Centre Poland (NCN)

Gabriela Czarny
Trainings

- Research Data Management in specific research disciplines (online)
- MOOC Trainings on Research Data Management
- Research Data Management in the policy and practice of the National Science Centre Poland (online)

https://www.youtube.com/@ncngovpl
Research Data Management in specific research disciplines (online)

- Linguistics
- Earth and related environmental sciences
- Communication and media studies
- Sociology
- Medical sciences, pharmacology and pharmacy and health sciences

- 1300 participants registered
MOOC Trainings on RDM

2 October 2023

• Launch of four online courses on Research Data Management
• Courses for Researchers and Data Stewards

2000 participants registered
(by 26 October 2023)
Courses for Researchers

- two levels
- about 20-24 hours of self-directed work
- text materials, multimedia presentations, interviews with experts from various fields and areas relevant to research data management and webinar recordings

https://navoica.pl/courses
Courses for Data Stewards

- two levels
- about 26 hours of self-directed work
- text materials, multimedia presentations, interviews with experts from various fields and areas relevant to research data management and webinar recordings

Research Data Management in the policy and practice of the National Science Centre Poland (NCN)

- 1000 participants registered
Open Science at the National Science Centre Poland (NCN)

Open Science is a mode of conducting research and communicating its results, which rests on the principles of open access, transparency, reproducibility and verifiability. These principles are of key importance for the development of science in accordance with the most stringent standards of research integrity. Open science is also the foundation of social accountability, as it ensures broad access to the latest, verified knowledge.

The principles of open science have been implemented by many research-funding agencies around the world, including the European Commission. They are also advocated by international organisations that shape research policy, such as Science Europe and UNESCO.

Open Science applies to many aspects of research processes and research artifacts, including access to publications, data, protocols, software or source codes. The NCN has implemented open access solutions with respect to research data and publications, while its proposal and report assessment procedures are informed by the principles of DORA – the San Francisco Declaration on Research Assessment.

Letter by the Director of the National Science Centre concerning open access and data management

Thank you!
