

EOSC Federation – Interoperability

Questions posted on Slido

- What level of detail the EOSC Federation handbook goes/can meaningfully go on interoperability requirements for the nodes?
- Barbara: you talk about communities at different levels of maturity -- do you have more information on this -- particular which ones are making the investments?
- What is the impact on your tests of journals forbidding to use their texts for AI training, mining, technologies ... like Elsevier even for research purposes?
- So by whom will the semantic interoperability problems in EOSC be addressed? An OA group? The interoperability Task Force?
- Dimitris: to what extent is FDO the same idea as "Data Product" from the Data Mesh world?
- Are there any updates on a first recommended configuration for FDOs?
- Anyone seeing, or even trying to leverage, the similarity in objectives between (1) the "interoperability within EOSC" endeavor and (2) the data-space movement?
- Hi from Base4nfdi - we analyzed the EIF for the Base services. Is it appropriate for common services or more for data integration services
- Much of EOSC is about interoperability of services. Do the frameworks the panelists discuss see how they are applicable for federated services rather than data
- Metadata is an area where different people and professions interpret the same concepts differently. How do you manage this to gain clarity?
- If you pick one thing that the current INFRAEOSC Projects should join forces on to work on. What would you suggest? That your believe most would agree with?
