

Unconference | Findability in FAIR: Touchpoints between EOSC and Open Web Search

Questions posted on Slido

- What should be the impact metrics for datasets? Are citations / views / downloads the only ones?
- As a manager of a dataset repository, what are the key technical steps to ensure optimal 'findability' of the data?
- I still don't get what the RAID is for. Is this for discovery purposes? Can you make an example of a scenario in which RAID may be a game changer?
- Why do we need another search engine for data and other scientific outcome?
- Are there Plans to Bring all three presented approaches together under the EOSC Research hub discovery Portal?
- Why do we need to learn about Tasks in a project...?
- What are the "best practices in using PIDs" beside the recommendation to use one...?
- What would be the main advantage of Open Web Search services for EOSC stakeholders?
- PIDs are essential, but how to confirm relevance of the search result?
