

# INFRAEOSC projects: Early results and future plans for the common collaboration areas

## Questions posted on Slido

- Is it possible to see the members of the opportunity area expert groups?
- How do the semantic interoperability group of the corresponding Task Force, and the OA2 (Metadata/Onto/Interop) coordinate and don't duplicate?
- Some ecosystems, e.g. Gaia-X, identifying conformance assessment bodies to validate certain services from diff providers, e.g. PID services. Possible for EOSC?
- How does OA2 feed into EOSC IF?
- Can OA3 define quality standards for EOSC? (to be agreed of course by governance processes)
- In general, how does the community feel about these OAs pushing EOSC so that it can reach its high-level objectives?
- In OA5 with all this interest in joining, what are the biggest issues these new people are hoping to address?
- When did the OA expert groups start?
- Question for OA5: if an advisory group is needed, why create yet another group rather than empowering the OA groups to fulfil this role?
- Many editors accept DOIs for references to datasets, but they do not set the relations in CrossRef metadata. How to force them doing things right?
- How do OA2 and the Semantic Interoperability sub-group of the Interoperability TF coordinate and collaborate?
